Island stuck in Time

The Cool Guys:
Robert Valencia – Programmer, Artist
Email: rvalenc3@charlotte.edu
Phone: 980-307-3962
Cooper Adams – Producer, Designer
Email: cadam115@charlotte.edu
Phone: 980-621-9892

Work Schedule

Task	Task Description	Time Estimate	Task Due Date	People Assigned
Creating Character Sprites	Design and create the sprite sheet for the main characters movement. This includes walking (direction will be mirrored) and jumping	1 Hour	9/20/2026	Robert
Create Main World Backdrop	Create the main backdrop used for all levels	2 Hours	9/22/2026	Robert
Create tutorial Room	Create and decorate the tutorial level room with basic world sprites.	2 Hours	9/23/2026	Cooper
Create Level 1 Room	Create and decorate the level 1 room with basic world sprites.	2 Hours	9/23/2026	Cooper
Create Level 2 Room	Create and decorate the level 2 room with basic world sprites.	2 Hours	9/23/2026	Robert
Create the GUI layout	Create the layout and design of the GUI including, Opening screen, menu, end screen	2 Hours	9/23/2026	Cooper
Program Main Character Movement	Program the basic movement controls for the player. Walking, and jumping	1 Hour	9/24/2026	Robert

Implement Main Character Attributes	Add health attributes and cool down variables for future abilities.	10 minutes	9/24/2026	Robert
Create and implement vines	Create and implement vines that damage the player	2 Hours	9/24/2026	Cooper
Create and implement buttons, gates, and platforms	Create, implement, and place the buttons, gates, and platforms onto each level.	6 Hours	9/27/2026	Cooper
Implement Main Character Abilities	Implement the pickup attribute, and the looping attribute for the player	7 Hours	9/28/2026	Robert
Create and implement interactive boxes	Create and implement boxes that can be picked up by the player.	2 Hour	9/28/2026	Robert
Add remaining interactives into level maps	Add the necessary vines, boxes, buttons, gates, and platforms into the level rooms	2 Hours	9/29/2026	Cooper
Implement GUI	Implement and add the Menu's and title/end pages	2 Hours	9/30/2026	Robert
Create Title Music	Create the title music for the title page	2 Hours	10/3/2026	Cooper
Create Background Music	Create the music to play in the background of all the levels	2 Hours	10/3/2026	Robert

Game Testing	Test the game for bugs and tinkering any necessary Variables	3 Hours	10/5/2026	Robert & Cooper
Outside Game Testing	Give the game to outside players to test.	2 Hours	10/6/2026	Robert & Cooper
Bug Fixes	Fix any identified bugs from the previous testing	2-5 Hours	10/8/2026	Robert & Cooper
Create Presentation Video	Create the presentation video for the project	3 Hours	10/13/2026	Robert & Cooper
Create Main Presentation	Create the presentation to be show in front of class	4 Hours	10/18/2026	Robert & Cooper
Practice Presentation	Practice the presentation for class	2 Hours	10/20/2026	Robert & Cooper

Group Meeting Times:

Meeting Platform: Zoom/In-person

Team Meeting Time:

Tuesdays – 12pm - 2pm
Fridays – 12pm - 2pm

Game Overview

Game Genre	Platform	Number of Players
Side Scroller Puzzle	PC	1

Key Points:

- A simple side scroller with a puzzle aspect. Solve how to get to the coast of the island you are stuck on.
- The player is able to move around, pick-up/push certain objects, and use the special ability to create “time clones” of yourself.
- Use the abilities granted to you to solve puzzles and discover more about the island you have awaken from
- Whenever the player successfully reaches the coast, they reawaken back in the center of the island, previous area layouts change, and puzzles get more difficult.
- The player must go through 3 iterations (1 tutorial + 2 levels) of the island before they can escape, each one with more difficult puzzles than the last.

Biographies

Robert Valencia:

Since I was a child I always liked the idea of designing, building, and creating something for people. I also loved to play video games, which perfectly clashed with my ambition to create my own games. I've managed to branch my skills in programming from recreating Terraria in Scratch, to designing my own Tamagotchi written in C++. In middle school my dream to design games truly strived, and I began dabbling in Scratch games. Making my own sprites, my own small games, and learning the engine. That eventually branched into high school when I took a computer science class and began learning Python. I also joined the popular state-wide organization YTAC (later VESL), an esports and game developer organization to learn how to use unreal engines. Forwarding to my college years, I've continued to hone my skills to reach my goal of creating my own games, and to this day I still continue to do so.

I've learned countless skills and used some tools for the game development process throughout my journey. I've used and learned various game engines including Unreal Engine, Godot, and Unity. And I'm familiar with many languages, including but not limited to C++, Python, C# and Java. I know that these skills will assist my team positively and contribute to the final product.

Cooper Adams:

I’ve been playing Video Games almost the entirety of my life, and I’ve seen when a game does something good, and when games do something bad. I have a pretty good understanding of complex topics and mechanics games can implement and how to thoroughly think through them. I have also experienced many different themes of games and can hone in on any one theme that we decide on as a group. I trust I would make good decisions that could help benefit and improve the playing experience for the game we make.

Game Description

- The fictional background of your game (what is the background story? Are you saving the princess, or saving the world?) This includes a brief description of major characters in your game.
    - You, the player, awaken at the center of an island. You don't know who you are, where you are, and why you are there in the first place. Your only instinct is to reach the coast of the island. You begin to make your way to the coast while encountering various challenges presented by the island. Once you conquer what the island has shown you and reach the coast, your vision begins to fade and suddenly you awaken back at the center of the island. It turns out that this island is a glitch within time, what happens when there's an error in world generation one could say. As you attempt to reach the coast countless times, the island appears to be deteriorating at the hand of reality itself. But in each iteration you discover how to utilize the island's weird rules to your advantage. After finishing the challenges the island brings you, the player discovers that they are the original ruler of the kingdom of the island, and the one who doomed it in the first place.

- What is the goal of the player of the game (how does the player win?)
    - The goal of the game is to get through the puzzles from each level to reach the coast, and for the last level, reach the inside of the castle that is shown within the background of the game.

- What are the key challenges presented to the player?
    - The key challenges are the obstacles presented by the island's terrain, and maybe even yourself. Within each island iteration/level there will be a different set of puzzles the player will have to go through. But you may need some assistance for some of the puzzles, so you utilize the ability to create time clones of themselves.

- How does the player interact with the game?
    - One of the main abilities planned is the ability to spawn and despawn previous “lives” or “iterations” of the player, or in other words a “time clone”. This allows them to essentially use themselves as platforms, to perform multiple actions at once, and assist themselves in completing each level
    - The player is also able to carry, and put down crates, and push barrels to assist themselves in traversing the terrain.

- How does the player advance the fictional aspects of the game (if possible)? For example, how do they save their best friend, or save the world?
    - The game showcases and depicts the lore within the games world, and more is discoverable as you complete the game. Lore wont be a major aspect of the game, but rather something you discover in the background as you play.

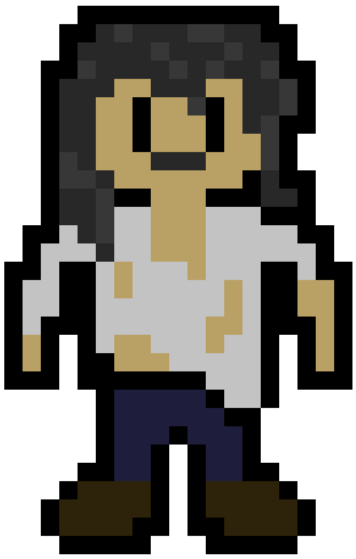

- If the game has levels, a brief description of each of the levels.
    - The Game consists of a tutorial level, and 2 main levels, each named an “iteration”
    - The first iteration (tutorial) of the island is going to be a simple side scroller with no real abilities or puzzles, this will properly and slowly introduce the player into the game's controls and set the scene of the game. This includes jumping, pushing barrels and picking up boxes.
    - The second iteration the player notices they begin at the top of the island again. The island generates different obstacles than last time and you unlock the ability to create time clones of yourself. This level requires a little more brain power as it requires you to tactically use your clones to get you through the island.
    - The last iteration changes the island once again. But the puzzles get even harder, having to utilize all the mechanics you've learned to use in previous levels simultaneously. Rather than going to the coast again though, you enter the castle that was pictured in the background of the plains, where you can beat the game, and discover the truth about who you are, the former king of the kingdom that ruled the island.

Cheat codes

Alt + R = reset player spawn
Alt + L = set lives to 30
Alt + T = teleport next to other side of room
Alt + N = go to next room
Alt + P = set lives to 1
Alt + Shift + (numbers 0-9) = teleports to the corresponding room
